

GSM Scanner

to detect local providers and their signal quality

BENEFITS

The innovation of the GSM - Scanner is the high mobility of the system and the very simple intuitive operation.

- Scan of the entire GSM - network
- Adjustable frequency bands (900 MHz and 1800 MHz or both at the same time)
- No SIM card required
- Usable in all European networks
- Signal strength of each provider will be displayed by bar chart
- Signal strength can be displayed as percentage, in dbm or rssi (adjustable)
- For selected provider all available channels can be scanned and displayed
- Jamming detection
- Store up to 23 scan results
- Very robust IP54 housing
- Intuitive operation
- Large, long-life rechargeable battery
- Small, smart housing
- Charging cradle

The new GSM Scanner offers an innovative mobile measuring system which is easy and intuitive to use. The GSM Scanner is a dedicated solution in a robust and reliable handheld.

The solution is ideal for mobile application specific requirements, e.g. determination of antenna positions and the selection of suitable provider

Technical Data

Specifications

- Operating voltage 3,6 V , 2,8 Ah lithium-polymer-battery
- OLED-display with 320x240 (WxH) pixel
- Time display
- Battery charging indication
- Battery status display
- Protection: IP54
- Weight: 150 gr.
- Dimensions: (L/W/H): 90 / 71 / 18 mm
- Charging cradle
- Belt clip
